

GREENSCOPE INITIATIVE

Berkshire continues its effort to reduce the environmental impact of cleanroom wipers with EcoClean®, 100% cotton nonwoven cleanroom wipers. EcoClean® 35 and EcoClean® 60 are 100% biodegradable and made from renewable/sustainable cotton. These attributes combined with higher absorbency per unit weight than leading polyester/cellulose blended wipers = fewer wipers used with less depletion of natural resources, reduced lbs. to waste disposal, and reduced impact when disposed of in landfills.

EcoClean® 35 and EcoClean® 60

ATTRIBUTES

- No binders, coatings, or additives (as with most wipers/textiles which would limit or prevent the biodegradation)
- Versus Thermoplastic/polymer based/blended wipers - EcoClean® - Breaks down into the earth naturally and does not form "microplastics" which is on the radar for most eco-conscious programs.
- In a compost, 100% cotton may biodegrade within as little as one week but usually takes about 5 months. A nylon cloth takes 30-40 years to biodegrade.
- High absorbency design reduces landfill waste impact when compared to a more traditional heavier weight product.

BENEFITS

- Excellent strength
- Heat resistant
- Extremely soft
